Dear

DATING ULTRASOUND

Clinical History: Dating scan.

Findings: There was evidence of an intrauterine gestational sac containing a foetus with CRL of 18.8mm equating to a gestational age of 8 weeks and 2 days. Foetal heart rate was 185bpm.

Normal 3.2mm yolk sac was noted.

The maternal ovaries were unremarkable.

Conclusion: Study confirms presence of a single live intrauterine foetus of 8 weeks and 2 days gestational age with EDD of 05/04/2025, at least 4 days in advance of the estimated based on the LMP.

Thank you for referring this patient.

Kind Regards,
